To Whom it May Concern: I enjoy satellite radio a great deal, and oppose any attempt by the NAB to stifle this new technology. Just this weekend a piece was done on CBS Sunday AM indicating how popular this new medium has become. I really like that I am able to listen to commercial free music, and I am willing to pay for that privilege. I also like the new traffic channel, which allows me to get continuous local updates. In addition, I don't like all the consolidation that has occurred in commercial FM radio, and AM radio is dominated by right wing political doctrine, so we need the alternative that satellite radio affords.
